NONEXTENSIVE STATISTICAL MECHANICS
AND THERMODYNAMICS: BIBLIOGRAPHY *

October 14, 2023

GENERAL THEORY

Generalized entropy and thermostatistics: [1]
2918]
H-theorem and irreversibility: [2919–2977]
Ehrenfest theorem, von Neumann equation: [3, 2978–2984]
Quantum statistics: [2985–3113]
Variational and perturbative methods; Bogolyubov inequality; Green functions; Path integral; Boltzmann equation: [3002, 3114–3212]
3748]
Fluctuation-dissipation, Nyquist and Onsager reciprocity theorems, Kubo’s linear response theory and Kramers-
Kronig relation: [6, 3749–3771]
Poisson equation: [3772–3788]
Callen identity: [3789]
Ising transmissivity: [3790]
Classical equipartition principle: [3791–3793]
Connection with quantum uncertainty: [3794–3848]
Connection with Fisher information measure: [3849–3863]
Connection with ergodicity, nonlinear dynamical systems, self-organized criticality, cellular automata, fractals: [9, 89–97, 3080, 3864–4082, 4084–4361]
Connection with general relativity, cosmology, dark energy, string theory: [3850, 4362–4368, 4370–4549]
Connection with quantum groups and quantum mechanics: [4550–4599]
Connection with wavelets; Signal processing; EEG: [4600–4714]
Connection with quantum correlated many-body problems: [4715–4727]
Connection with the Gentile and the exclusion Haldane statistics: [4728–4731]
Connection with finite systems: [3749, 4728]
Rigorous results (generalized entropy and thermostatistics): [3868–3873, 4732–4737]
Integral transformations (Hilhorst and Prato formulae): [2990, 3749, 4738–4741]

ONE-BODY SYSTEMS

Two-level system: [1, 4742]
Harmonic and anharmonic oscillators: [1523–1541, 4736–4744]
Free particle: [4745–4750]

*This regularly updated Bibliography (at http://tsallis.cat.cbpf.br/biblio.htm) contains 9880 articles from 16720 signing (co)authors. It does not address the vast existing literature addressing nonextensive thermodynamical anomalies, but only articles including at least one substantial relation with nonadditive entropies, nonextensive statistical mechanics and thermodynamics. It is a fairly complete listing whose classification and indexation are, however, only indicative.
Larmor precession: [2980]
Rigid rotator: [4740–4746, 4751–4754]

**MANY-BODY SYSTEMS**

Ideal, classical gases, and other toy models: [3749–3791, 4738–4745, 4751–4814]
Independent spin paramagnet, Landau magnetism: [4556–4562, 4815–4822]
Black-body radiation and photonic systems: [4823–4885]
\(d = 1\) Ising ferromagnet: [4886–4890]
\(d \geq 2\) Ising and other ferromagnets: [3790, 4891–4940]
Infinite-range Ising ferromagnet: [4941]
Potts ferromagnet, Molecular field approximation: [3789, 4908–4927, 4932–4945]
Percolation: [4946–4948]
Electron-phonon systems; tight-binding-like Hamiltonians; nanosystems; theoretical chemistry: [4949–5006]

**APPLICATIONS**

Self-gravitating systems, Stellar polytropes, Vlasov equation, Galaxies, Galaxy clusters: [3171, 3772, 3850, 5007–5185]
Turbulence; Granular matter; Viscous fingering; Navier-Stokes equation; Boltzmann equation; Mossbauer effect: [3772, 5231–5260, 5267–5609]
Ferrofluid-like materials, Lennard-Jones and other fluids: [4932, 6297, 6305–6327]
Solitons: [6328, 6329]
Plasma (electron velocity distribution, magnetohydrodynamics): [6330–6885]
Glass, Spin-glass: [6886–6926]
Superfluid helium; Bose-Einstein condensation: [6927–6951]
Test of Boltzmann-Gibbs thermostatistics: [4379, 4850, 4851]
Cosmic rays; Elementary particles: [6950–7204]
Biological systems; Microemulsions; Liquid crystals: [7205–7345]
Stochastic resonance; Brownian motors: [7346–7371, 7374, 7376–7391]
Connection with the Theory of perceptions: [17, 18]
Connection with the Theory of finances: [7363–7605]
Consistent testing; Statistical inference; Theory of probabilities: [962–967, 969–978, 980–1052, 3167, 7607–7999]
Simulated annealing and optimization techniques; Monte Carlo (Genetics, Traveling salesman problem, Data fitting curves, Quantum chemistry, Gravity models, Lennard-Jones clusters, Thomson model, spin systems, proteins, nucleic acids): [3190, 4919, 7992–8425]
Neural and other networks: [972, 7300, 7301, 8427–8559, 8561–8575]
Analysis of time series (nonlinear dynamics, epilepsy, earthquakes, economics) and images: [4600–4628, 8576–9262]
Geophysics: [4627, 4628, 8666, 9263–9363]
Medicine: Tomography: [4629–4636, 8576–8578, 8926, 9364–9463]
Symbolic dynamics, linguistics, philology, cognitive sciences, social sciences, hydrology, ecology: [3920–3930, 3932–3953, 3957–3980, 7927, 9464–9481, 9483–9661]

The document contains a list of authors and references, each with their respective works. The references are primarily in the field of particle physics, focusing on topics such as the production of hadronic jets, charged particle distributions, and the study of particle production in various collision scenarios. The references include articles from journals such as Phys. Particles and Nuclei Lett., J. Phys. G: Nucl. Part. Phys., and Eur. Phys. J. C. The topics range from the study of di-electron decays in high-energy collisions to the violation of the Wiedemann-Franz law in hot hadronic matter created at high energies. The references also cover studies on the production of J/ψ and ρ mesons, the study of event multiplicity and energy dependence in pp collisions, and the use of Tsallis statistics in analyzing data from experiments like the LHCb and CMS detectors.
